COLLAGE

Visual Loom is a procedural pattern generator, built for Prismdrifter to produce on-brand textures and graphics without a designer manually building each one.

Every output derives from one element: a black-and-white gradient, subdivided and layered according to a fixed rule set rather than drawn or sampled by AI. Random Look generates a complete composition in one click, with a layer range control to keep results simple or push them toward more complex, layered textures. Sliders then adjust the result directly, layer by layer, or click-and-drag on the canvas to drift the layers against each other for a faster, more direct feel. Finished work exports as vector (SVG) or raster (PNG) at multiple sizes.

ivanvidovic.github.io/loomrift

Use for: background textures, print graphics, social support graphics, and other brand assets as they come up.

Workflow: generate with “Random Look”, set the layer range for the desired complexity, adjust with sliders or by dragging directly on the canvas, export. No setup required before producing usable output.
